

Obesity & Chronic Digestive Diseases Across Europe

Over 50%
of the EU adult population
is overweight or obese¹

Obesity increases the risk of **all-cause mortality**⁴

Obesity-related costs drain
€81 billion from
European economies per year⁵

The number of school-age children and adolescents with obesity has risen **more than 10-fold** in the past 40 years²

1 in 3 children in Europe
are now estimated to be **overweight**³

Obesity is a major
cause in the
development of
chronic digestive
diseases...

Paediatric **fatty liver disease** is one
of the most significant complications
of childhood obesity⁶

Almost 75%
of patients with obesity have non-alcoholic liver disease
(NAFLD), significantly increasing the risk of advanced liver
disease, liver cancer and requiring liver transplantation⁷

Obesity causes an **increased risk**
of complications in colorectal,
pancreatic and liver cancer surgery⁹

Obesity represents an overarching risk
factor for other causes of **liver disease**⁸
